Screening for Collusion in Public Procurement: *Evidence from 5 Million Auctions in India*

- Bidder collusion inflates the cost of public procurement, which accounts for close to a third of government spending in developing countries, yet its prevalence remains largely unmeasured where enforcement capacity is weak and prosecutions are rare. Using 42.3 million bids on 15.7 million electronically tendered Indian public contracts since 2008, I build a pair-level screen from twelve warning signals the Competition Commission of India instructs procuring officers to watch for; the flags depend on bidding strategies rather than realized prices. Collusive behavior is diffuse rather than concentrated in a few large cartels – the majority of regular bidders are flagged to collude with at least one partner – and tenders in which a flagged pair wins while its partner also bids settle 3.89 percent higher relative to the government's engineering estimate. A structural estimation recovers markups 3.33 percentage points higher for colluding pairs; competitive pricing would save close to 7.2 percent of the annual procurement budget.

Working Papers

Power-Sharing and Low-Level Conflict: *Evidence from Political Reservations in India*

- Mandated political representation for low-caste groups in India decreased conflict from insurgency by 5-10% and reduced crime against lower castes.

Work in Progress

Hidden Campaign Finance: Evidence from India (with Amol Singh Raswan)

- Firms exploit anonymous donation channels, giving to parties other than those in their publicly disclosed portfolio.

Cognitive Enrichment and Human Capital: *Experimental Evidence from Developing Countries* (with Uyanga Byambaa)

- Randomized school-based chess programs in Kenya and Malawi raise multiple dimensions of cognitive ability, with larger gains among students who were weaker at baseline.
